

Corrections Off-line Education Platform Secure Classroom Intranet

COEP Education Server

Over 35 million resources, special portals and curricula for the corrections community, and the capacity to serve custom third-party software. Includes Web 2.0 features like Moodle, a course management system, and the Community Information Portal for teaching IT, Web design, and writing skills.

Computer Lab

One COEP server can be shared by hundreds of workstations on a secure local area network (LAN.) Any operating system and any browser can be used on the client computer. Video, audio, and multimedia files open in seconds.

Wireless Devices

Over a secure wireless network, all of the COEP content and services can also be accessed using laptops, netbooks, tablets, and media players.

COEP

Corrections Off-line Education Platform

Comprehensive - Secure - Interactive - No Internet

WiderNet has developed an innovative off-line education information server designed specifically for the corrections environment. We seek partners and deployment sites for this innovative way to deliver vocational training, re-entry skills, information literacy, and an Internet-like experience to incarcerated populations.

Over the last twelve years, WiderNet has distributed over 1,600 off-line libraries to institutions in developing countries and the US. Since 2008, WiderNet has been working in two dozen prisons across the U.S. to demonstrate the potential of off-line libraries to teach marketable job skills and provide educational opportunities.

With thousands of Web sites on board, the COEP "looks and feels" just like the Internet, providing lightning-fast access to over 35 million educational resources including video, audio, and books. Plus Moodle, the learning management software is built-in.

To an end user, the COEP – with its search engine, catalog, and wealth of information – functions exactly like the Internet, hence all the skills gained using the COEP translate effortlessly to the

Internet.

Requiring no Internet connection, the COEP is wholly contained on its own server and only accessible over a secure intranet (LAN); so administrators control what information is available in the computer lab.

No social media or pornography.

Having surveyed dozens of correctional educators and hundreds of inmates on their information needs, WiderNet librarians have gained permissions from hundreds of authors and webmasters to include the best resources for corrections education in the COEP system. These ongoing efforts are integrally supported by every institution that purchases a COEP server.

WiderNet librarians and volunteers are collaborating with corrections educators and community advocates to identify and secure more documents. We are developing custom portals to provide best-of-class materials to serve the corrections system.

The COEP emphasizes:

- Re-entry skill building

- Life skills
- High school completion
- IT education
- Vocational advice and training
- Computer-based training
- Legal reference materials
- ESL
- Web design
- ...and much more.

More custom interfaces are being designed to make it easier for educators and inmates to quickly locate the right materials.

WiderNet is a nonprofit organization, affiliated with the School of Information and Library Science at the University of North Carolina at Chapel Hill.

WiderNet is dedicated to improving digital communications to all communities and individuals around the world in need of educational resources, knowledge, and training.

COEP

Corrections Off-line Education Platform
Comprehensive - Secure - Interactive - No Internet

Enterprise Education Server

Education everywhere! No Internet.

This powerful plug-and-play server provides instant access to millions of digital documents – including video and multimedia. It can be shared by thousands of users with any Web browser. Easy installation. A reliable, secure, and fast platform for building and delivering any curriculum.

- Rich educational content
- 35 million multi-media documents
- Extra security and content filters
- Community Information Platform
- Built-in Web editors
- LDAP security
- Moodle
- MySQL
- PHP
- Looks and acts just like the real Internet
- Fast and comprehensive search interface
- Dynamic catalog
- Free OS System upgrades via FTP
- No spam, no viruses, no pornography, etc.
- Full one-year warranty.

Technical Specifications

- Intel QuadCore i3 CPU
- 16GB RAM
- 1TB OS Hard Drive
- 6TB eGranary Hard Drive
- DVD RW Drive
- 2x Gigabit LAN ports
- 2 HDMI, 1 DisplayPort (& VGA adaptor)
- 2x USB 2.0
- 8x USB 3.0

Add \$600 for i5 CPU with 32GB RAM
